CURAGUARD

The nature of healthcare is changing.

CuraGuard is an intelligent healthcare and wellbeing monitoring system which continuously and remotely measures an individual's vital signs, whether they're at home, on the move or in a residential or clinical environment. So if you fancy an afternoon nap, CuraGuard will remain alert at all times. In the event of unexpected event an alert will be sent to the appropriate support team enabling action to be taken.

Easy to understand, affordable pricing.

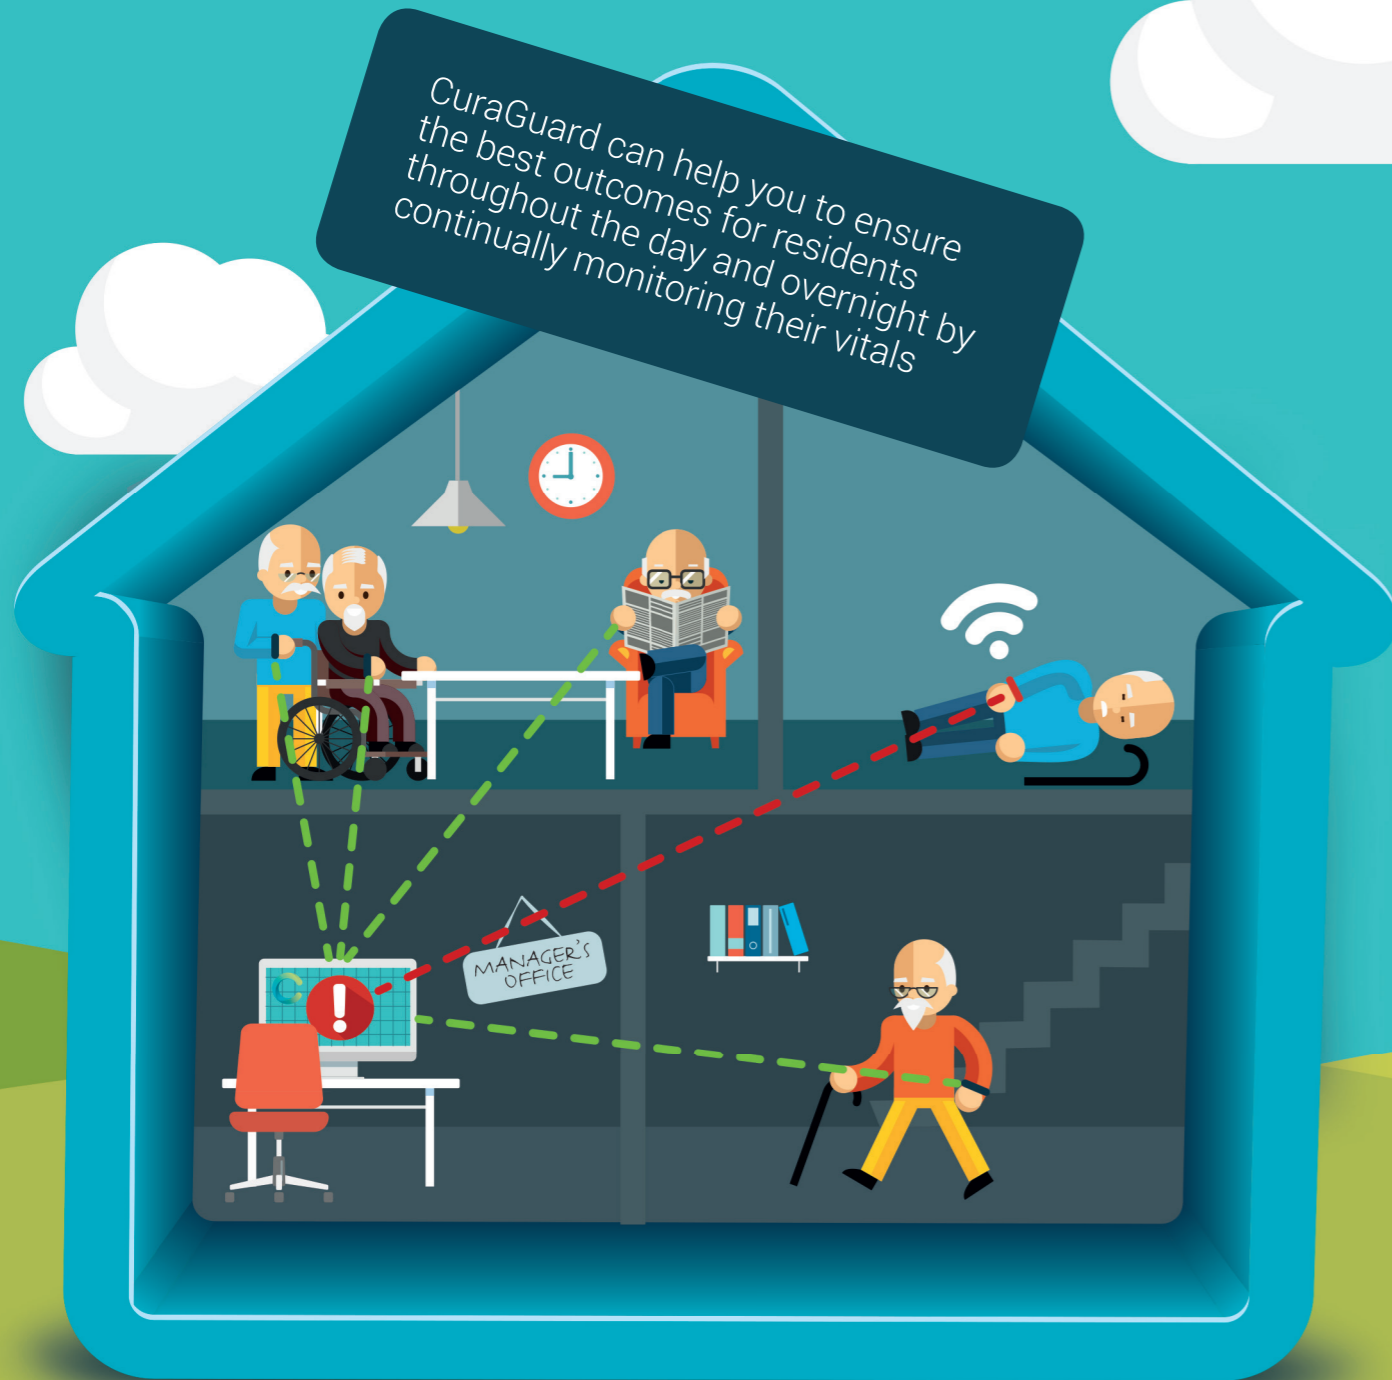

Likewise, care delivery is evolving with increasing emphasis on preventative care, proactive assistance, early intervention and real-time monitoring.

CuraGuard is the perfect companion for those who...

- ✓ Suffer from a long-term health condition
- ✓ Struggle with independent living
- ✓ Are recovering after a recent hospital stay
- ✓ Live alone with vulnerable health
- ✓ Are unstable on their feet or prone to falling
- ✓ Need regular visits from friends and family
- ✓ Are diabetic and require regular glucose monitoring

CuraGuard can help you to ensure the best outcomes for residents throughout the day and overnight by continually monitoring their vitals

Changing the face of healthcare delivery.

CuraGuard for **RESIDENTIAL CARE**

Increasingly, residential homes and care facilities are playing a vital role in helping to deal with mounting pressures and the growing demands of an ageing population. CuraGuard has developed a digital care home service that enable care homes to prevent avoidable hospital admissions and reduce delayed transfer of care with confidence.

So should a resident suffer from a long term or chronic condition or be rehabilitating from an injury or recovering from a surgical procedure, be prone to forgetfulness or is a little unsteady in their feet, CuraGuard enables residents to manage their own day-to-day healthcare with the confidence that their care and support network are able to make a timely, rapid and informed response if necessary.

The benefits of CuraGuard in residential homes or nursing care include...

- ✓ Improving the visibility of residents health, both internally and with family members
- ✓ Highlighting any deterioration of health at an early stage
- ✓ Instant data access promotes informed choices and better decision-making, improving outcomes
- ✓ Encouraging patient involvement in the management of their own care

Care Home Residents are **40-50%** more likely to require **Emergency ADMISSIONS**

Enabling clinicians to empower patients.

CuraGuard for **CLINICAL CARE**

Connected health solutions improve quality of care and bottom line.

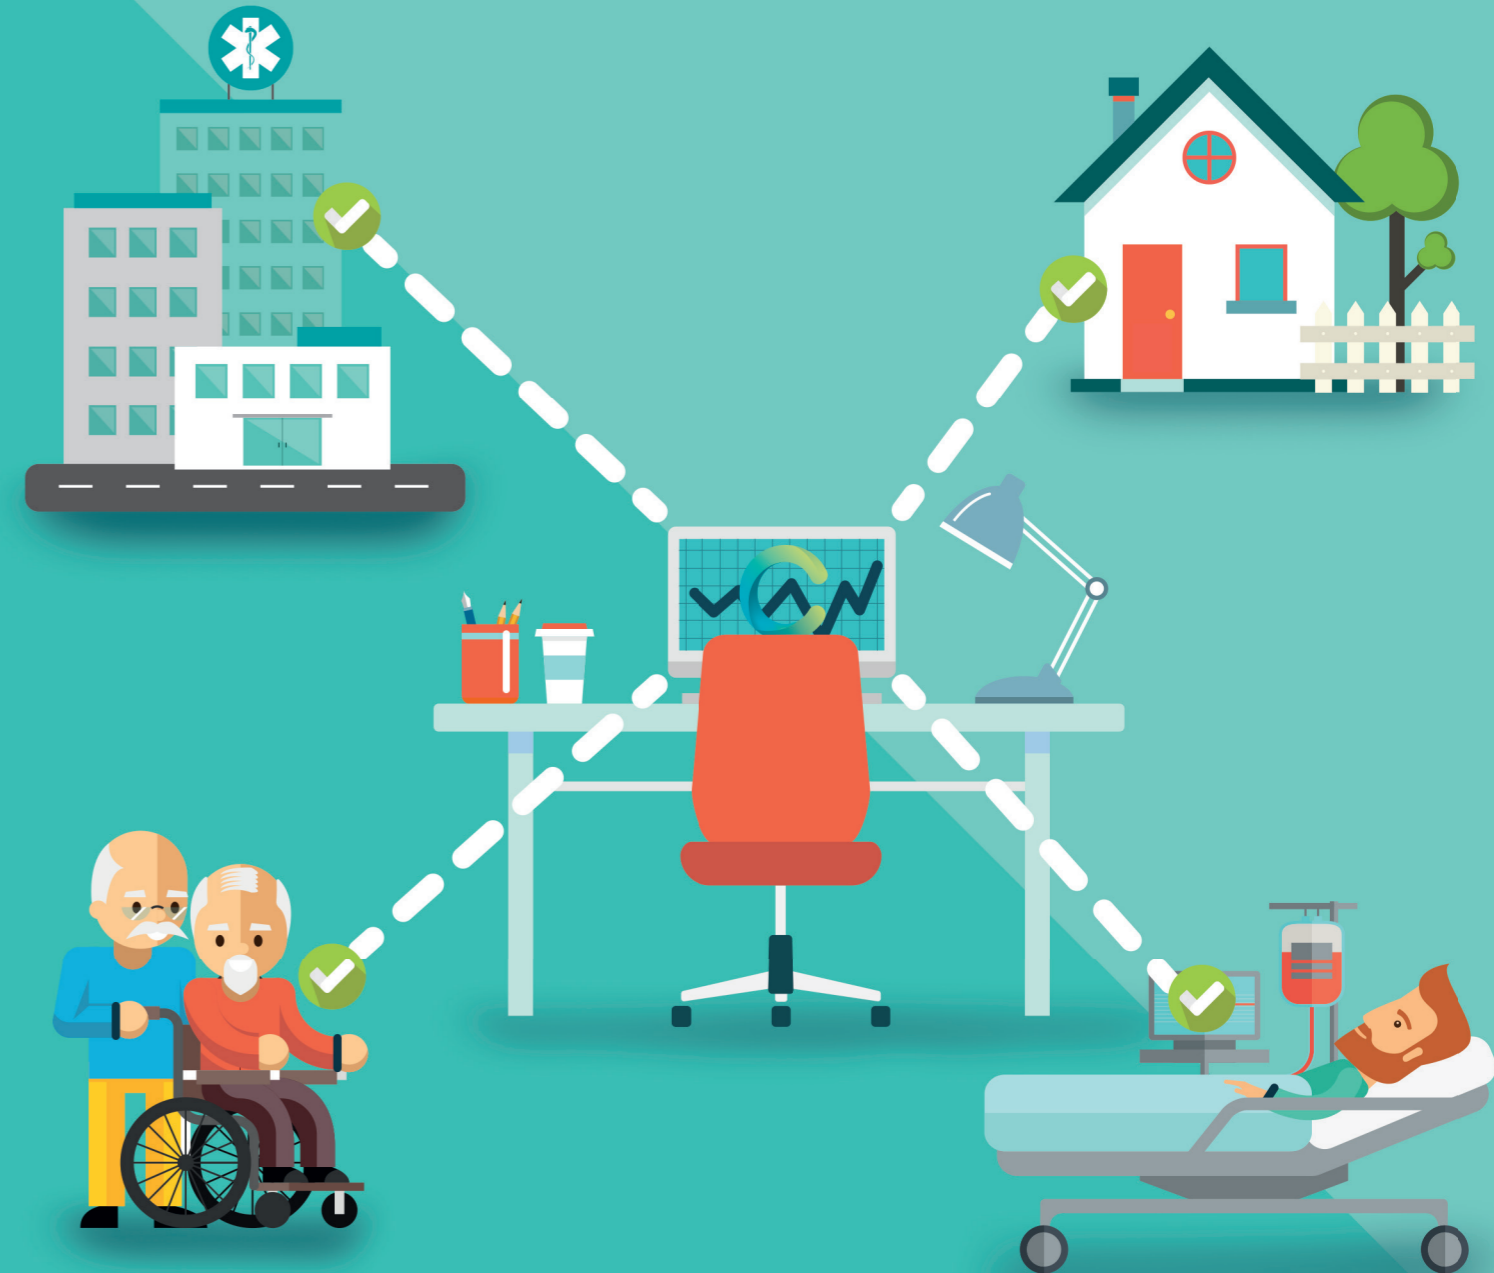

The challenges faced by service commissioning authorities are as diverse as those who use the service. To reflect this diversity, CuraGuard has been designed to fit a wide range of service models rather than attempting to define a one-size-fits-all solution.

CuraGuard's round the clock real-time monitoring enables health and social care services to offer a timely, rapid, and informed response. Significant numbers of patients occupying hospital beds could be cared for in other settings.

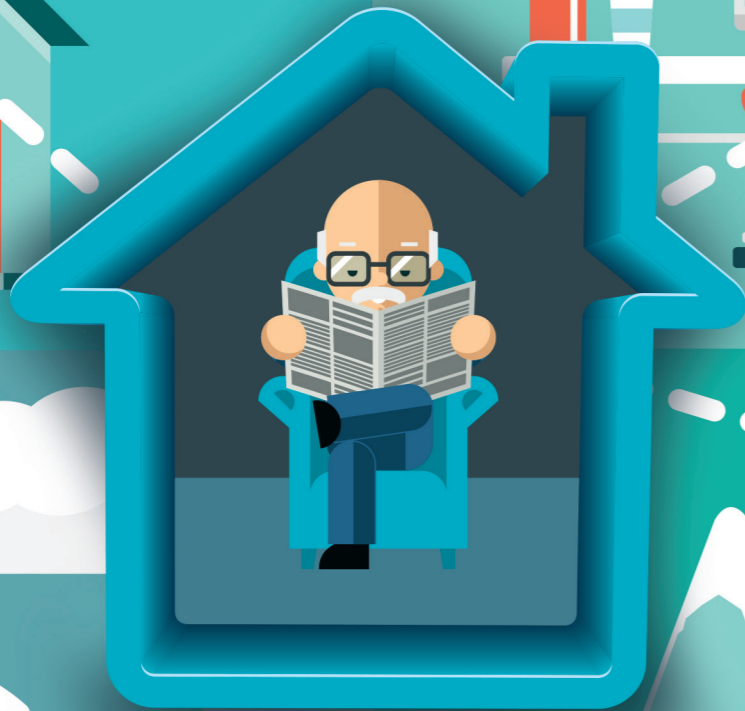

The benefits of CuraGuard in clinical care include...

- ✓ Clinicians can build digital health services for any area of care and of any size
- ✓ Improved monitoring, highlighting any deterioration of health and enabling early intervention
- ✓ Reducing non-elective secondary care admissions and time spent in hospital
- ✓ Promotes integration with other clinical systems, improving coordination between the NHS and care homes, allowing the effective use of specialised community nursing teams
- ✓ Instant access to data means better informed choice and decision-making
- ✓ The system promotes earlier hospital discharge and reduces delayed transfer of care
- ✓ Encouraging the patient to become involved in the management of their health and wellbeing

FROM
WORK

Keeping you safe
at home or away.

CuraGuard **IN YOUR HOME**

Living in familiar surroundings, near to friends and family, surrounded by your own possessions, the freedom to go where you want, when you want - for many, retaining their independence is important. Sometimes, that may mean accepting a little extra help.

Should you suffer from a long term or chronic condition, if you're rehabilitating from an injury or recovering from a surgical procedure, if you feel vulnerable at home for any reason, CuraGuard will monitor you 24-hours a day while enabling you to manage your own healthcare.

CuraGuard encourages you to manage your own day-to-day healthcare, maintain control of the outcomes and enables you to live your life with confidence knowing that whatever may happen, wherever you go, someone is always looking out for you.

The benefits of CuraGuard at home...

- ✓ Your vital signs can be monitored through the day and night, wherever you are
- ✓ No more medical emergencies without anyone else knowing or responding
- ✓ Provides reminders for clinical appointments and lets you know when medication is due
- ✓ CuraGuard can be tailored to your specific condition, circumstances and needs
- ✓ The system allows all authorised clinicians, friends and family to access your vital signs records

WHILE
TRAVELLING

FROM...WELL,
ANYWHERE!

Driving change in healthcare.

CuraGuard **AND THE NHS**

The NHS five year forward view, published in 2014, sets out a shared view of how services need to change. Its key argument is that much more focus should be given to prevention care and early intervention; that with proactive assistance patients should be given far greater control of their own care; and that the barriers relating to care provision should be broken down.

Such a system would enable a significant number of patients occupying hospital beds to be cared for in their own home via a remote monitoring service such as CuraGuard. CuraGuard continuously monitors a patient's vital signs and instantly shares them in real-time with authorised care givers, enabling them to make informed decisions as to future treatment.

Within their home environment, a patient suffering from a long term or chronic condition, rehabilitating from an injury or recovering from a surgical ...

procedure would be encouraged to take responsibility for monitoring their own care and wellbeing, confident in the knowledge that clinical staff are watching over them at all times.

In the event of any unexpected changes in the patient's health or wellbeing which may have otherwise gone unnoticed, their support network will be immediately alerted, enabling them to make a timely, rapid and informed response.

CuraGuard is designed to fit a wide range of service models and can be customised to be an exact match. Combining this functionality with CuraGuard's predictive analysis capabilities produces a robust, intelligent and highly flexible remote monitoring solution, fit to take the nation's health service forwards.

Cutting edge technology.
